Figure 1. Selection generate specific hits and
a diverse set of background binders

5
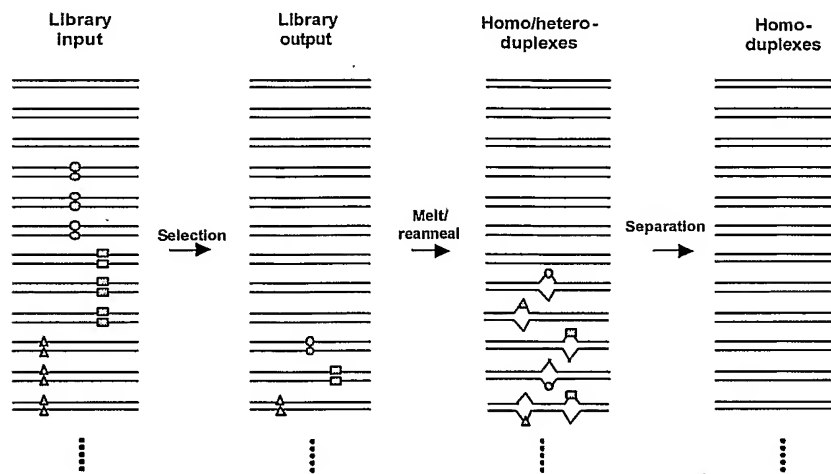

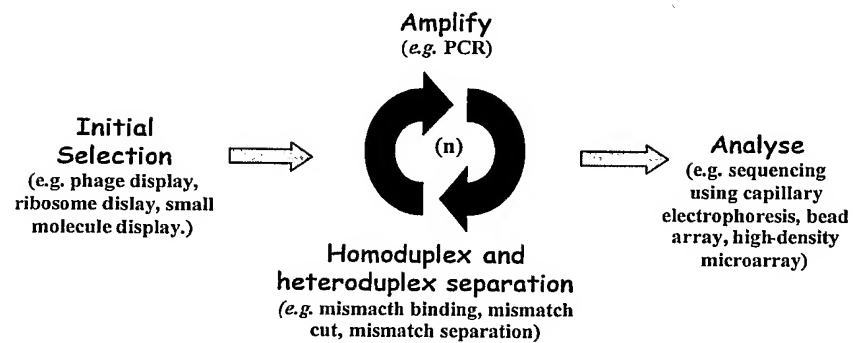

Figure 2. Homo- and heteroduplexes

Figure 3. Homo- and Hetero-duplex formation and separation

5

Figure 4. The overall principle of mismatch selection (MISE)

Amplify
(*e.g.* PCR)

Initial Selection
(e.g. phage display, ribosome dislay, small molecule display.)

(n)

Analyse
(e.g. sequencing using capillary electrophoresis, bead array, high-density microarray)

Homoduplex and heteroduplex separation
(*e.g.* mismacth binding, mismatch cut, mismatch separation)
